

1. Improve data upload workflow as follows to ensure that we can get a better understanding of the uploaded data and give the user a chance to provide description of the dataset and fields.
  - a. Data Upload -> User Action: Describe you Data -> System Action: Schema Definition -> System output: a table formset with field name, field description based on each field analysis and a comment for user to update field description -> User Updates the field description comments-> System saves the updated data schema and field definition.
  - b. Users can pay to export and save the latest data definition.
2. Quick Actions Buttons - Upload New Dataset is working, “Create Visualization” and “Ask Business Question” are not working. The expectation is to Lead to visualization and Ask Questions Page, respectively

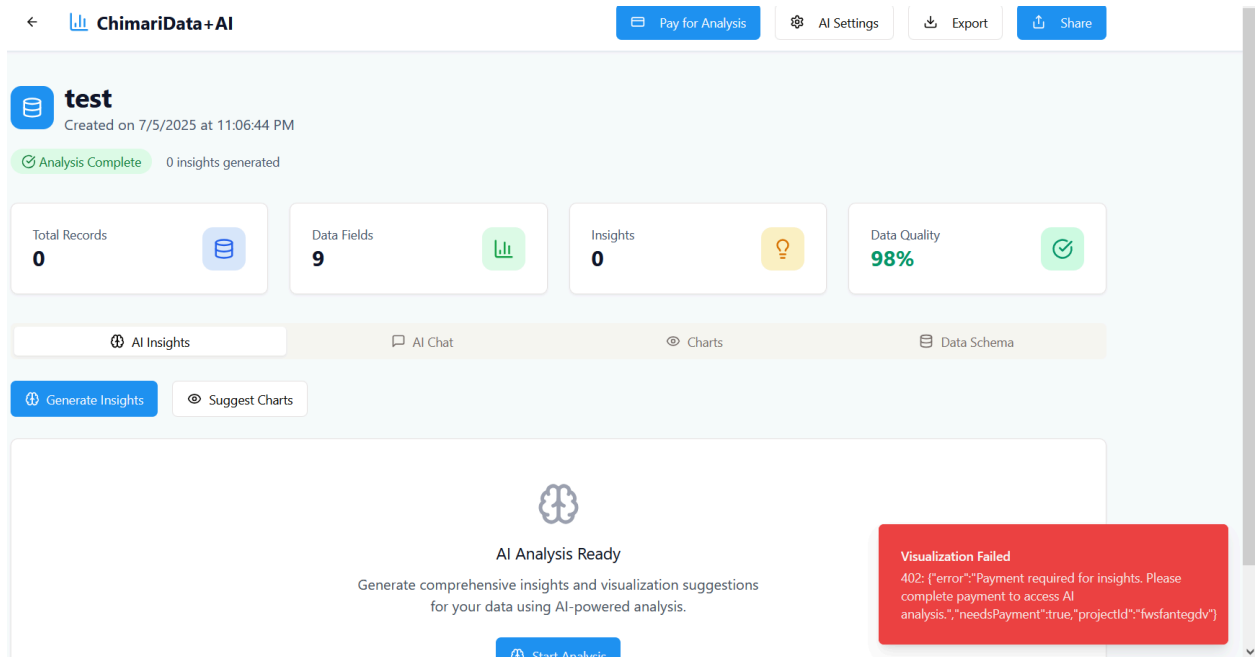

3. On Clicking Testing Project I correctly get Projects Dashboard.

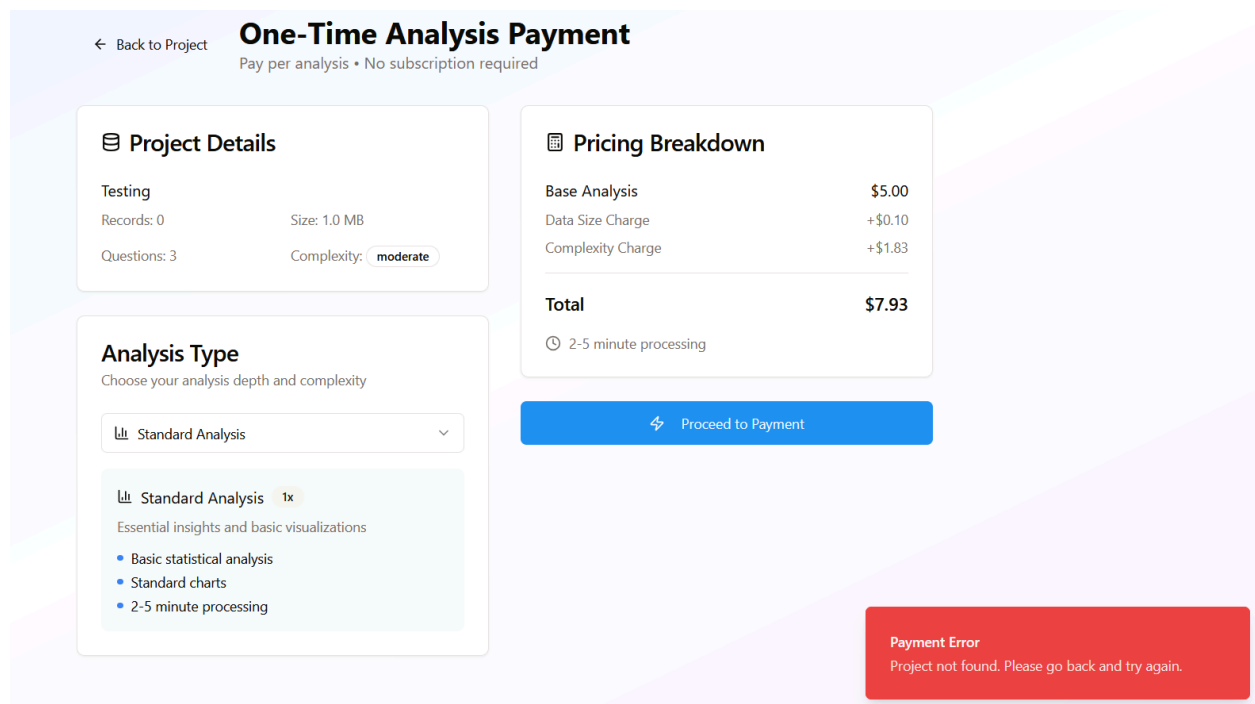

4. On Clicking Generate Insights - I get a Payments RequiredError. Expected behavior is to go to the “One Time Analysis Payment Page”

5. On Clicking “Suggest Charts” button -I get 402- Payment Required Error- Expected behavior is to go to the payments page and add visualisation item.

- 6.
7. Onclicking “Proceed to Payment” Button I get a payments error - Expectation is to open Stripe payment method page.

## 8. Export and Sharing

Let's improve Export and Sharing to use google sheet, excel or pdf instead of json.
