Schema Validation & Review

Review and edit the detected data types for your columns. This ensures accurate analysis.

Column Name	Detected Type	Sample Values	Actions
Q2_Growth	integer	4 5 4	
Employee ID	integer	1001 1002 1003	
Q1_Workload	integer	5 4 3	
Q7_Teamwork	integer	5 4 4	
Survey Year	integer	2022 2022 2022	
Q10_Fairness	integer	4 5 3	
		4

Detected Schema (Joined Dataset)

Total columns: 24

Column Names:

Q2_Growth | Employee ID | Q1_Workload | Q7_Teamwork | Survey Year | Q10_Fairness | Q6_Resources | Q8_Wellbeing | Q4_Leadership | Q3_Recognition | Q9_Job_Clarity | FreeForm_Culture | Q5_Communication | undefined_Gender | FreeForm_AI_Fears | FreeForm_Leadership | undefined_Ethnicity | undefined_Hire Date | undefined_Leader ID | undefined_Department | +4 more

Data Types:

integer	13 columns
string	8 columns
date	3 columns

Review & Edit Schema

Group Metric numeric | Needs Transform | ⚠ 50% Low Confidence - Review Required

Edit

Numeric metric to analyze within and across groups

- Low confidence mapping - manual review recommended

Data Scientist Recommendation aggregated

How to calculate: Calculate summary statistics per group (mean, median, std)

```
GROUP BY grouping_var; CALCULATE mean, median, std(metric) per group
```

Map to numeric column. Will compute descriptive statistics per group.

Source Column: **Q2_Growth**

Transformation Logic

Calculate summary statistics per group (mean, median, std)

```
# Group by: grouping_var; CALCULATE mean, median, std(metric) per group
```

plain English (e.g., "Convert date string to ISO format" or "Calculate total by summing quantity and price").

Source-to-Target Mappings

Target Element	Type	Source Column	Confidence	Enables Analyses
Unique Identifier	text	ID × UUID × GUID × serial_number × + Add Columns	100%	Descriptive Statistics
Of the Survey Questions	categorical	question_text × response_options × question_type × mandatory × question_id × + Add Columns	100%	Descriptive Statistics
Engagement Scores	numeric	Q7_Teamwork ×	100%	Descriptive Statistics

Total Elements | Require Transformation | Direct Mappings

Source-to-Target Mappings

Unique Identifier	text	serial_number × + Add Columns	100%	Descriptive Statistics
Of the Survey Questions	categorical		00%	Descriptive Statistics

Select columns (multi-select for derived values)

Executive Summary

Employee Engagement Analysis will follow a low analysis plan centred on exploratory data analysis to generate actionable insights from uploaded data. Our data review rated 65% data quality across 100 records, giving the team confidence to answer questions such as which factors have the greatest impact on performance?. Execution will emphasise key KPIs, with decision-ready outputs expected within 1 hour.

Complexity	Duration	Estimated Cost	Analysis Steps
low	1 hour	$10.01	1

Data Requirements & Business Context

Confirm the fields our agents need and review the KPIs and compliance considerations driving this plan

Required Data Elements

The plan did not identify specific data columns. Review analysis steps to confirm inputs.

Transformations to plan for

- Profile dataset to confirm column types and address missing values

Confirm data requirements
I reviewed these fields and confirm our datasets contain or will capture them for this analysis.

Relevant KPIs

No KPIs were highlighted for this plan.

Compliance & Reporting

No specific compliance or reporting standards noted.

Analysis Plan

These analyses were recommended based on your goals. To change them, go back to the Plan step.

1 analyses recommended based on your goals in the Prepare step. These will remain consistent throughout your journey.

Understand Your Data 2-3 min ✓ From Your Goals
See what your data looks like with charts and summaries

Find Patterns 3-5 min
Discover how different things relate to each other

Predict Outcomes 5-8 min
Understand what factors drive results

Group Similar Items 8-12 min
Find natural groups in your data

Categorize & Predict 10-15 min
Predict which category something belongs to

Spot Trends Over Time 6-10 min
See how things change over days, months, or years

6 analysises will run
Estimated duration: 18-30 minutes
To modify analysis selection, return to the Plan step.
